

RoleRocket AI - Cohort Manager Guide

Audience: Institutions, schools, training centers, workforce programs

Purpose: This guide explains exactly how institutions and students should use Cohort Manager, starting from signup.

Last updated: April 30, 2026

1) What Cohort Manager Is

Cohort Manager is the institution dashboard that tracks student activity in RoleRocket AI, identifies at-risk students, and gives action tools to help them move forward quickly.

- Overview tab: high-level numbers and at-risk categories
- Students tab: full student table, filters, search, bulk actions, CSV export
- Interventions tab: focused lists for outreach with copy-email actions

2) Institution Setup (First Time)

- Log in with an institution account (account type must be Institution).
- Open Cohort Manager from the left menu or dashboard tab.
- Use Copy Invite Link or Open Setup Wizard in Overview.
- Share your institution signup link with students.

Important: The invite link includes your institution name in the URL so students are linked to your cohort automatically during signup.

3) Student Signup Flow (What to Tell Students)

- Open the institution-provided signup link.
- Create a RoleRocket account normally.
- Confirm the institution field is prefilled and correct before submitting.
- After signup, use at least one tool (Resume Generator, Job Search, Interview Assist, or Job Alerts).

Students may appear in your cohort shortly after account creation and usage events sync.

4) Recommended Institution Message for Students

You can copy/paste this message:

"Please register using this link: [paste invite link]. This links your account to our institution cohort. After signup, complete your resume and submit at least one application so we can track your progress and support you."

5) Daily Workflow for Institutions

- Step 1: Check Overview metrics (Total, Subscribed, Free Tier, Active 7 days).
- Step 2: Review At-Risk cards (no resume/tool use, inactive 14+ days, no applications).
- Step 3: Open Interventions and copy email lists for targeted outreach.
- Step 4: Use Students tab filters and export CSV for advising meetings or reports.
- Step 5: Direct students to the exact next tool from Student Workspace Tools.

6) At-Risk Categories and Actions

- No resume or AI tool use: send Resume Generator link + onboarding instructions.

- Inactive for 14+ days: send re-engagement message + dashboard link.
- Zero applications: send Job Search + Job Alerts links and require first application.

7) Troubleshooting

- If Cohort Manager looks empty: verify students used the institution signup link.
- If a student is missing: confirm their account has your institution name and that they completed at least one activity.
- If stats look stale: click Refresh and hard refresh browser (Cmd+Shift+R).
- If access is denied: user must be logged in with institution account type.

8) Best Practices

- Schedule a weekly intervention review with exported CSV snapshots.
- Use short email campaigns by risk type instead of one generic blast.
- Track conversion goals: first resume, first application, first interview practice.
- Encourage Job Alerts activation early to improve application volume.

9) Quick Checklist

- Institution account confirmed
- Invite link shared to all students
- Students completed first tool usage
- At-risk outreach sent weekly
- CSV export reviewed for advisor meetings

End of guide.
